Databases

• Collections of articles, reports, books, and other types of items
• Provide a means of searching for information you need
• Databases are designed and organized in a manner to help you search
• Might include actual “text” or might just be an index without text
Databases
(also called article databases, index or index/abstract databases)

- Articles are **indexed** in databases **fields**.
  - Index of **topics** in back of a book
  - Index of **authors** in back of a book
  - Subjects and authors could be database **fields**
Databases
(also called article databases, index or index/abstract databases)

• Generally, one searches using words or terms in fields. Each field can be indexed
  – Abstract
  – Title
  – Keyword
  – Subject
  – Author
  – Publication

  – “Select a field” in Ebsco generally means will search in all fields. Will illustrate.
Databases
(also called article databases, index or index/abstract databases)

• Have filters to let you specify ...
  – Year(s) published
  – Types of resources/studies (journal article, clinical trial, meta-analysis, etc.)
  – Geographic data
  – Age
  – Gender
  – And more ...
Databases
(also called article databases, index or index/abstract databases)

• CINAHL, PubMed, Medline, ProQuest Dissertations & Theses, Education Resources Information Center (ERIC), Education Research Complete, Sage Education Collection

Getting the actual article

• Some databases
  – (a) provide the actual article within the database
  – (b) link out to the article somewhere outside of the database
  – (c) do not provide the article (in which case one needs to use interlibrary loan ILL)

• Don’t forget to get the citations
Databases
(also called article databases, index or index/abstract databases)

• Articles are **indexed** in databases **fields**.
• Think of:
  – Index of **words/topics** in back of a book (topic field)
  – Index of **authors** in back of a book (author field)
  – Index of **images** in back of a book (images field)
  – Topics, authors, images are a few of many database **fields**
• Generally, one searches using words or **terms in fields**: abstract, title, keyword, topic, subject, and author are some possible **fields**.
  – “Show me all articles with *heart disease* in the title.”
Databases
(also called article databases, index or index/abstract databases)

- CINAHL, PubMed, Medline, ProQuest Dissertations & Theses, Education Resources Information Center (ERIC), Education Research Complete, Sage Education Collection

Getting the actual article

- Some databases
  - (a) provide the actual article within the database
  - (b) link out to the article somewhere outside of the database
  - (c) do not provide the article (in which case one needs to use interlibrary loan ILL)

- Don’t forget to get the citations

Abstract: Nutrition-related chronic health conditions among older adults are a growing concern. In this study, nutrition education materials were created for use in senior centers by graduate nutrition students. After the materials were presented, focus groups were conducted with participants (n = 02) to obtain feedback on the content and presentation. Findings related to the participant’s knowledge of nutrition-related information, strategies to improve future class sessions, and participant recruitment will be discussed. These findings will be useful to program administrators as they develop nutrition programs for older adults who are vulnerable to nutrition-related health problems.
